OroFacial Pain/TemporoMandibular Disorders

Presented by Dr. Sharath Chandra V Chedella

Course Outline:
The goal of this presentation is to discuss most commonly encountered TMJ Disorders in clinical practice. TMD are a group of conditions that afflict the temporomandibular joint, masticatory muscles, headaches associated with TMD, and some cervical conditions. Over the last few decades, a tremendous amount of work was done by the experts in this area, and now there is a systematic and evidenced based information pertaining to this.

The information presented here will help you obtain relevant information from the patient to make a clinical diagnosis of conditions that occur more frequently in day to day practice. The content of this lecture encompasses basic science/terminology and clinical steps to make a clinical diagnosis, and also offer treatments that are easy and reversible in nature.
